# STAINLESS STEEL COLLECTION

## SHARPSINKS

Better Materials. Better Sinks.

Our Stainless Steel sinks are manufactured according to the highest standards in the industry. We use premium culinary grade type 304 stainless steel to ensure a high luster and durable finish. Additionally, all of our sinks meet or exceed one or more of the regulatory certification marks for the USA, Canada and Europe.

## CARE & MAINTENANCE

### STAINLESS STEEL SINKS

Your new sink is made of premium stainless steel and has a nominal thickness of 16 or 18 gauge, depending on the line of sink you have. Stainless steel alloy is composed of both chromium and nickel. The presence of chromium enables the steel to form an invisible layer of oxide that protects it against corrosion. The addition of nickel to the alloy increases its corrosion resistance while adding a bright polished appearance, hardness, and exceptional resistance to all temperatures. The extra thickness of the steel in our sinks will resist normal abuse; however we do recommend the use of our strainer-grids to protect against accidental damage.

We suggest you clean the sinks as you would a stainless steel pot- use a mild detergent with a sponge, rinse and dry off. From time to time, you may also polish it to restore it to its original beauty and shine using 'Nevr-Dull' (purchased at online or retail stores) or any polishing cream for stainless steel.

### QUARTZ COMPOSITE SINKS

- **Care and use** - Avoid placing pots or hot objects in excess of 536°F into the sink. Avoid causing excessive thermal shock due to the presence of very hot and very cold objects on the sink at the same time. Avoid causing thermal shock due to the presence of very hot and very cold objects in the sink at the same time.
- Clean your quartz sink regularly using a non-abrasive sponge and dishwashing soap. Rinse and dry completely with a clean, soft cloth.
- **Scuffs and stains** - Use a magic eraser sponge to remove light scuffs, stains, and metallic marks. On stubborn areas use a soft scouring pad and mild abrasive cleaner (Soft Scrub® or Bar Keeper's Friend®). Clean, rinse and dry sink completely then apply olive oil to the sink surface.
- **Surface deposits** - To remove hard water, calcium or lime use Lime Away® or CLR® cleaner. Alternatively use white vinegar on a paper towel and rinse after 20 minutes,
- **Surface luster** - To restore luster and extend the time between cleanings apply a thin, even coating of Quartz Sink Conditioner, food-safe mineral oil, or olive oil to the entire sink surface with a cloth. Remove excess with a cloth or leave overnight. Reapply as needed.

### SERENITY CERAMIC SINKS

Clean the sink using water and a mild detergent with a sponge, rinse and dry off. Do not use harsh chemicals inside the sink; if you would not put it on your hands don't put it in the sink. (Avoid bleach, acids, thinners, etc.) Be advised that some foods contain acids, such as lemons. If these foods contact the sink, rinse off and dry it clean ASAP. Never lay rusted objects or objects prone to rusting inside the sink; although the sink itself is incapable of rusting it will stain if a rusted foreign object is laid in it. Do not put tea bags or coffee inside the sink. If you do, rinse and dry immediately. Sodas can stain the sink if not rinsed out immediately. These sinks do not resist abuse very well. Handle pots and pans with care.

### GEMSTONE SOLID SURFACE COLLECTION SINKS

Do not place hot pans directly from the burner or the oven into the Gemstone sink. Even though Gemstone sinks can withstand sustained temperatures up to 225°F, prolonged or extreme heat could cause yellowing and/ or cracking. To prevent cracking due to extreme temperature differences, frozen foods should be placed on a mat or rack - do not place items directly on the surface of the sink to thaw. Do not use your sink for cutting or chopping items. Although minor cuts and scratches can be repaired, deep cuts will require the services of a professional.

Gemstone sinks and bowls are non-porous so they can be easily wiped clean with a damp cloth or sponge and mild detergents or general purpose cleaners. If you have a factory matte finish, abrasive cleaners may also be used. Periodically, it may also be helpful to go over the entire surface with an abrasive cleaner or a wet Scotch-Brite pad to maintain a uniform appearance.

Spills & Stains: While most everyday spills can be removed with the cleaning techniques mentioned, some troublesome spills and stains such as food/hair dye, tea, and fruit drinks may require more aggressive cleaning. These items can be removed with a solution of 50/50 bleach and water allowed to sit for 15 minutes, drained, and flushed with water. Follow with a general cleaner and flush with water. On factory matte finish, if you prefer, you can scrub with an abrasive cleaner.

## ALSO AVAILABLE FROM ESI:

- **EDGEBANDING** - DOELLEN and Teknaform PVC, Real Wood Veneer Edgebanding, and more.
